Basic information

The Blue Media Online Payment Plugin for Magento is the easiest way to allow your online store customers use the most popular payment methods. When integrated with the store, the plugin offers the possibility to add over 400 banks to the payment options.

List of Features:

- Multiple store service.
- Optional checkout without registration.
- Two implement modes.
- Two ways to view the payment methods in the store:
 - On the Blue Media page – a classic or personalized view.
 - Within the store – an integrated view where the customer is immediately redirected to the bank or card payment page.

Requirements

- Magento: 2.1.0 – 2.3.1 version.
- PHP version compatible with requirements of store version.

Description of changes

2.7.7 version

- Fix bug that sometimes caused not displaying BLIK 0 modal.

2.7.6 version

- Added support for CZK currency.

2.7.5 version

- Show all possible statuses in module configuration.

2.7.4 version

- Update to Google Pay API 2.0.
- Simplification of Google Pay configuration.

2.7.3 version

- Changed in sorting algorithm.
- Fixed redirection to BM payment.

2.7.2 version

- Customized to Magento Marketplace requirements.

- Attention, .zip file structure has changed with this version. Installation and update command have been changed.

2.7.1 version

- Added support for Magento 2.3.1

2.7.0 version

- Added [automatic payments](#).

2.6.0 version

- Added support for Magento 2.3.0
- Added directed payment for [Google Pay](#).

2.4.0 version

- Added currency support: GBP, EUR, USD.

2.3.0 version

- Added refund support.

Installation

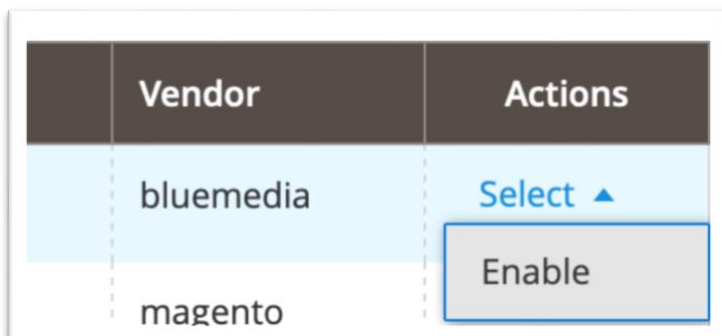

1. Download the latest version of the module from webpage <http://s.bm.pl/wtyczki>.
2. Upload .zip file to Magento's main catalog.
3. In Magento's main catalog, execute the command:
unzip -o -d app/code/BlueMedia/BluePayment bm-bluepayment-*.zip && rm bm-bluepayment-*.zip
4. Go to [module activation](#).

Module activation

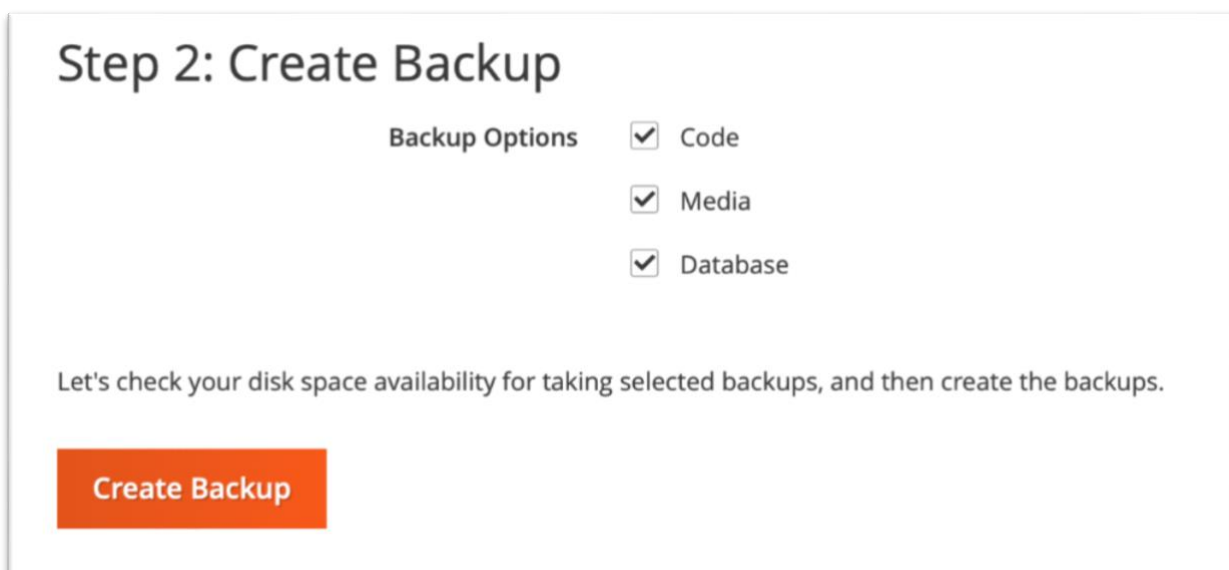

Activation via Administration Panel

1. Log into Administration Panel.
2. Log into Magento's Administration Panel.
3. Choose **System** -> **Web Setup Wizard** from main menu. The system will ask you one again for logging in.

- Go to **Component Manager**, find module **BlueMedia/BluePayment** from the list, click **Select** and then **Enable**.

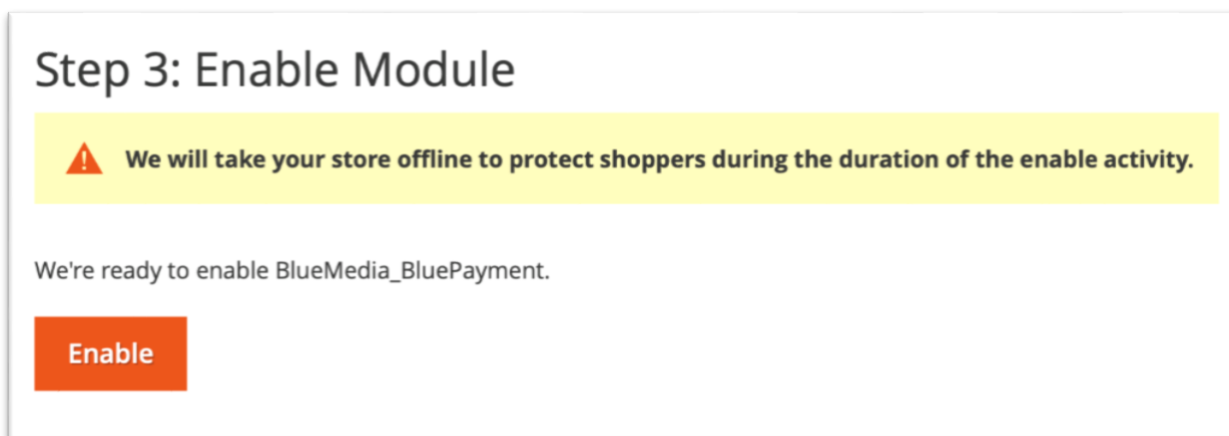

- Click **Start Readiness Check**. It will start dependency verification. Then click **Next**.
- (Optional) Create backup by checking all options and click **Create Backup**.

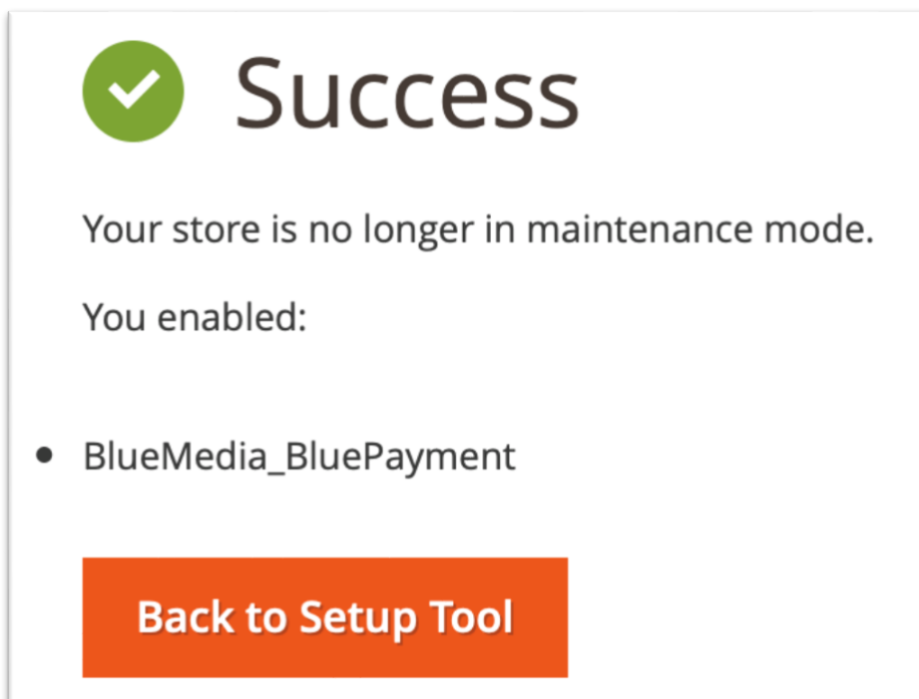

- After creating backup or unchecking options, go further by clicking **Next**.

8. Click **Enable**. The store will be shut down during activation of the module.

9. Module activation may take a while. After correct activation, the message will show up.

Activation via command line

1. In Magento's main catalog execute command:
 - **bin/magento module:enable BlueMedia_BluePayment --clear-static-content**
 - **bin/magento setup:upgrade**
 - **bin/magento setup:di:compile**
 - **bin/magento cache:flush**
2. The module is activated. You can go to [Configuration](#).

Configuration

It is available after logging into administration panel. Choose **Stores** -> **Configuration** in the menu, in next menu choose **Sales** -> **Payment Methods**, then expand on **OTHER PAYMENT METHODS** and **Online Payment BM**.

Basic module configuration

1. Go to page [module configuration](#).
2. Fill required fillings:
 - a. **Enabled** on **Yes**.
 - b. **Title** – the payment method title, which will be seen for customers.

- c. **Test Mode**
3. Fill the data from BM in tab below for currency support:
 - a. **ID service**.
 - b. **Shared Key** - of the service provided to partner by BM.
4. [Refresh cache](#).

Payment gateways

Payment gateways are available after logging into administration. Choose **BluePayment** -> **Gateways** from menu on the left.

Refreshing list of payment gateways

1. Go to [List of payment gateways](#).
2. Click **Synchronize Gateways** on the right of the screen.

Payment gateways editing

1. Go to [List of payment gateways](#).
2. On the list click the row with payment gateway which you want to edit.
3. Available options:
 - a. **Status** – it defines if gateway is currently available. Gateway refreshing proceed every 5 minutes (if CRON is configure correctly).
 - b. (informational) **Currency**
 - c. (informational) **ID**
 - d. (informational) **Bank Name**
 - e. (informational) **Name** – name of payment gateway.

- f. **Description** – Description which will be shown under gateway name.

- g. **Sort Order** – sort order on the list of payment gateways, which:
 1 – the first spot on the list,
 2 – the second spot on the list,
 ...
 0 – the last spot on the list.
- h. (informational) **Type**.
- i. **Is separated method** – it causes showing up the payment gateways as separated payment method.

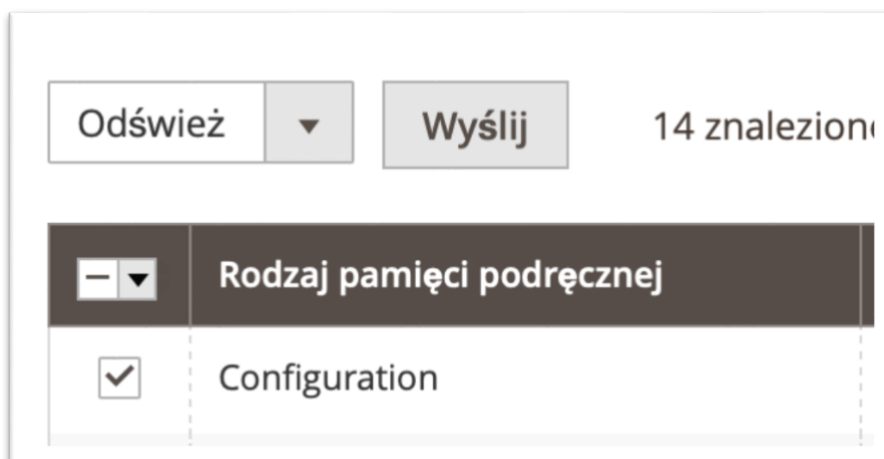

- j. (informational) **Logo URL**.
- k. **Use Own Logo** – it enables using your own logo for payment gateway.
- l. **Logo Path** – path to your own logo. It will be visible after checking **Use Own Logo** option.
- m. (informational) **Status Date** – date and time of the last gateway data update.
- n. **Force Disable** – it enables disabling payment gateway, regardless of **Status**.

Refreshing cache

Cache should be refreshed after every configuration editing.

1. Go to **System** -> **Cache Management**.
2. Check **Configuration**.
3. Choose **Refresh** from drop-down menu.
4. Click **Submit**.

The screenshot shows a web interface for cache management. At the top, there are two buttons: 'Odśwież' (Refresh) and 'Wyślij' (Submit). To the right of these buttons, it says '14 znaleziono' (14 found). Below the buttons is a table with a dark header row and a light body row. The header row has a dropdown menu with a minus sign and the text 'Rodzaj pamięci podręcznej' (Cache type). The body row has a checked checkbox and the text 'Configuration'.

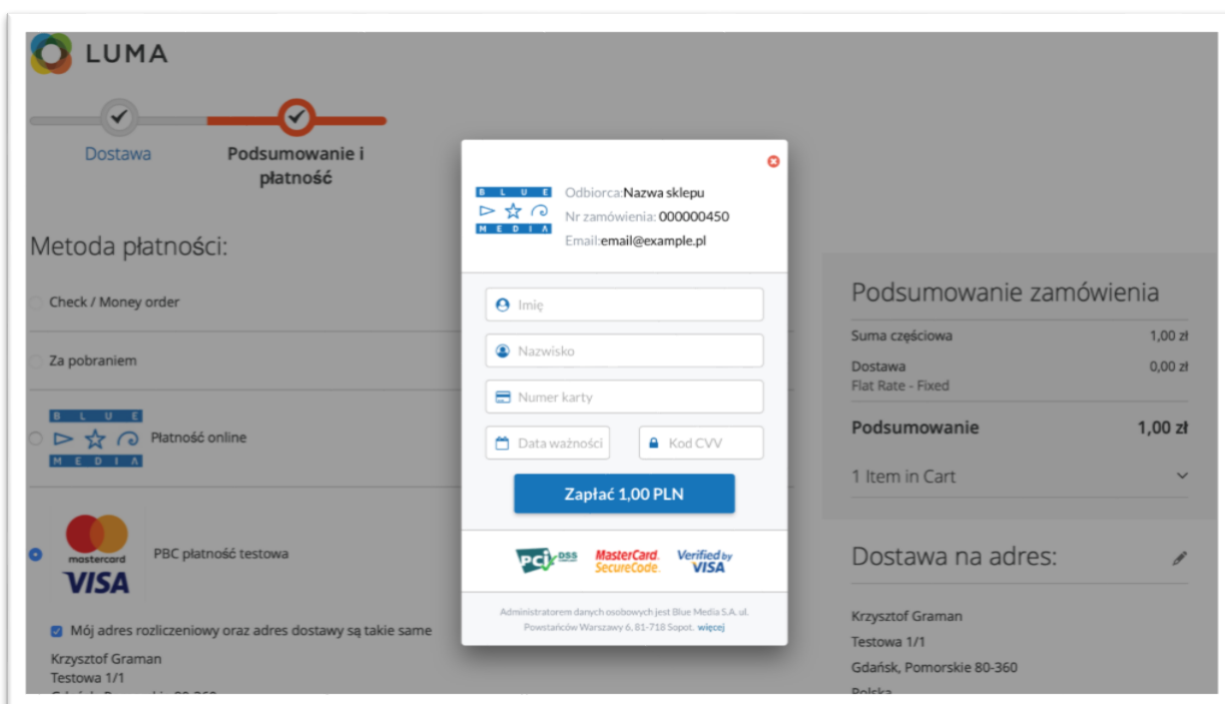

<input type="checkbox"/>	Rodzaj pamięci podręcznej
<input checked="" type="checkbox"/>	Configuration

Refunds

In preparation.

Payment in iframe

It enables paying via payment card without going out from the store and leaving purchase process. Implementation of this payment form requires two extra documents due to safety requirements of transaction process.

The screenshot shows the LUMA checkout process. At the top, a progress bar indicates 'Dostawa' (Delivery) is complete and 'Podsumowanie i płatność' (Summary and payment) is the current step. The 'Metoda płatności:' (Payment method) section shows 'Płatność online' (Online payment) selected. A modal window is open for online payment, displaying the Blue Media logo and order details: 'Odbiorca: Nazwa sklepu', 'Nr zamówienia: 000000450', and 'Email: email@example.pl'. The form includes fields for 'Imię' (First name), 'Nazwisko' (Last name), 'Numer karty' (Card number), 'Data ważności' (Expiry date), and 'Kod CVV'. A blue button labeled 'Zapłać 1,00 PLN' is at the bottom of the modal. To the right, a 'Podsumowanie zamówienia' (Order summary) table shows: 'Suma częściowa' (Subtotal) 1,00 zł, 'Dostawa Flat Rate - Fixed' 0,00 zł, and 'Podsumowanie' 1,00 zł. Below this, the delivery address 'Dostawa na adres:' is listed as 'Krzysztof Graman, Testowa 1/1, Gdańsk, Pomorskie 80-360, Polska'. Payment logos for Mastercard and Visa are visible at the bottom left of the modal.

Activation

1. Go to [module configuration](#).
2. Set **Iframe Payment** option on **Enable**.
3. Go to [gateway editing](#) of ID **1500** and bank name **Cards**.
4. Set **Is separated method** option.
5. [Refresh cache](#).

BLIK 0

BLIK „inside the store”. In this case secure code is placing directly on the store’s webpage, on the last stage of purchase process.

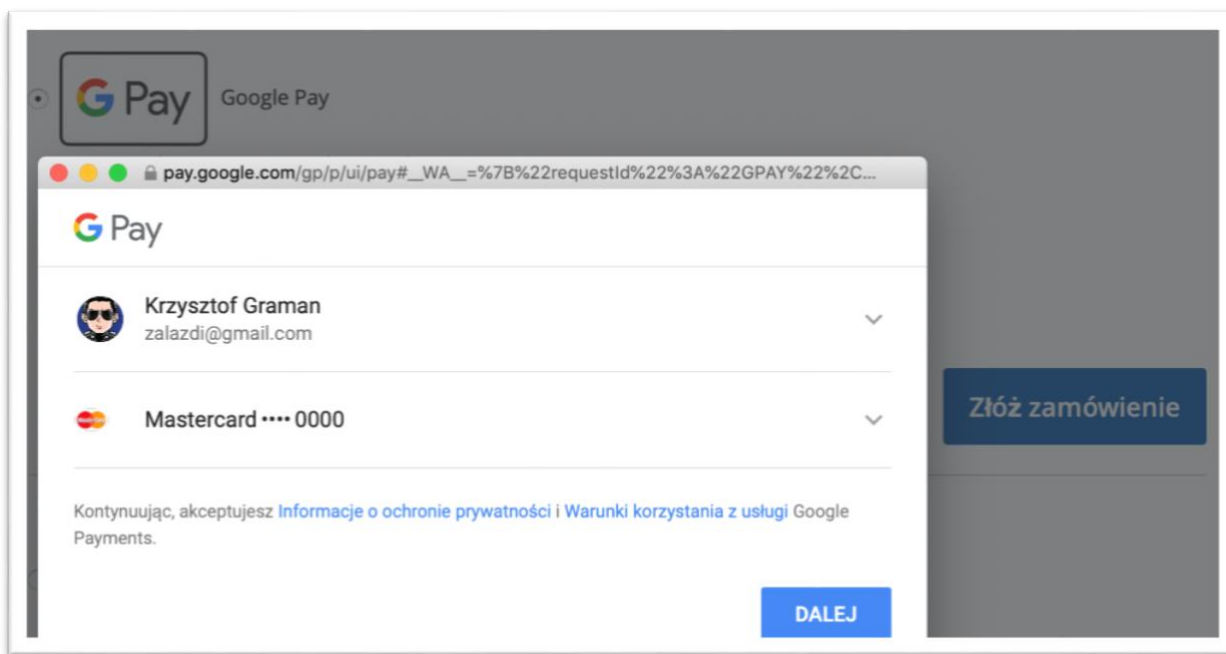

The screenshot shows a payment interface. At the top left, there is a blue circle icon followed by the text "BLIK". Below this, there is a horizontal line. Under the line, on the left, is the "blik" logo (black square with white text and a red dot). To the right of the logo is a text input field containing the number "111111".

Activation

1. Go to [gateway editing](#) of ID **509** and name **BLIK**.
2. Set **Is separated method** option.
3. [Refresh cache](#).

Google Pay

It enables payments using Google Pay. It is directly on the store's webpage, on the last stage of purchase process. Due to activation this payment method, contact to your adviser.

Activation

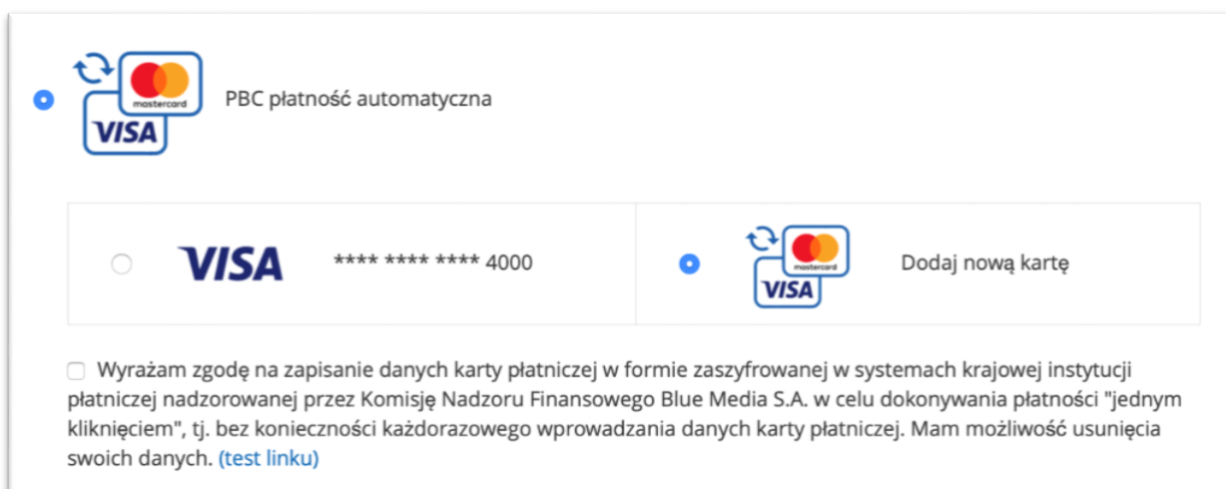

Google Pay is activated by default.

Google Pay is always displayed as separated payment method.

Automatic payments

One Click Payment is another way for comfortable payment via payment card. It enables quick payments with no need handing over all card's probate data for customer every time. The payment process consists one-time card payment's authorization and assigning card's data to specific customer. The first transaction is secured by 3D-Secure protocol and next transactions are fulfilling by sending from partner clamour of card charging.

The automatic payment is available only for logged in customers.

PBC płatność automatyczna

☐ **VISA** **** * 4000 ☒ **Dodaj nową kartę**

☐ Wyrażam zgodę na zapisanie danych karty płatniczej w formie zaszyfrowanej w systemach krajowej instytucji płatniczej nadzorowanej przez Komisję Nadzoru Finansowego Blue Media S.A. w celu dokonywania płatności "jednym kliknięciem", tj. bez konieczności każdorazowego wprowadzania danych karty płatniczej. Mam możliwość usunięcia swoich danych. ([test linku](#))

Activation

1. Go to [module configuration](#).
2. Fill **Autopay Agreement** appropriate terms of use to be accepted by customer.
3. Go to [gateway editing](#) of ID **1503** and type **Automatic Payment**.
4. Set **Is separated method** option.
5. [Refresh cache](#).

Card managing

The card stays saved and assigned to customer account during the first payment via automatic payment and accepting terms of use.

The customer is able to delate saved card in his account. To do this:

1. Log into the store.
2. Choose **My account** from upper menu.
3. Choose **Saved payment cards** from user menu on the left.

- There will be list of saved cards:

Zapisane karty płatnicze			
Numer karty	Data ważności	Rodzaj	
**** * 4000	12/2019	VISA	Usuń

- Click **Delete** and confirm.

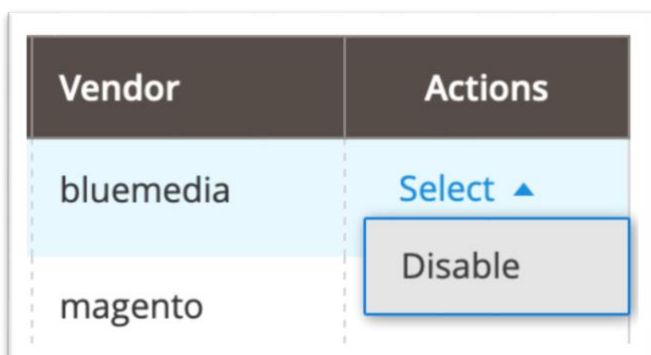

Module updating

- Download the latest version of the module from webpage <http://s.bm.pl/wtyczki>.
- Upload .zip file to Magento's main catalog.
- In Magento's main catalog execute commands:
 - **unzip -o -d app/code/BlueMedia/BluePayment bm-bluepayment-*.zip && rm bm-bluepayment-*.zip**
 - **bin/magento setup:upgrade**
 - **bin/magento setup:di:compile**
 - **bin/magento cache:flush**
- The module has been updated.

Module uninstallation

Through Web Setup Wizard

- Log into Magento's administration panel.
- Choose **System** -> **Web Setup Wizard** from main menu. System will ask you once again for logging in.
- Go to **Component Manager**, find module **BlueMedia/BluePayment** on the list, click **Select** and then **Disable**.

- Click **Start Readiness Check**. It will start dependency verification. Then click Next.

5. (optional) Create backup by checking all options and clicking **Create Backup**.

Step 2: Create Backup

Backup Options

☒ Code
☒ Media
☒ Database

Let's check your disk space availability for taking selected backups, and then create the backups.

Create Backup

6. After creating backup or unchecking options, go further by clicking **Next**.
7. Click **Disable**. The store will be shut down during activation of the module.

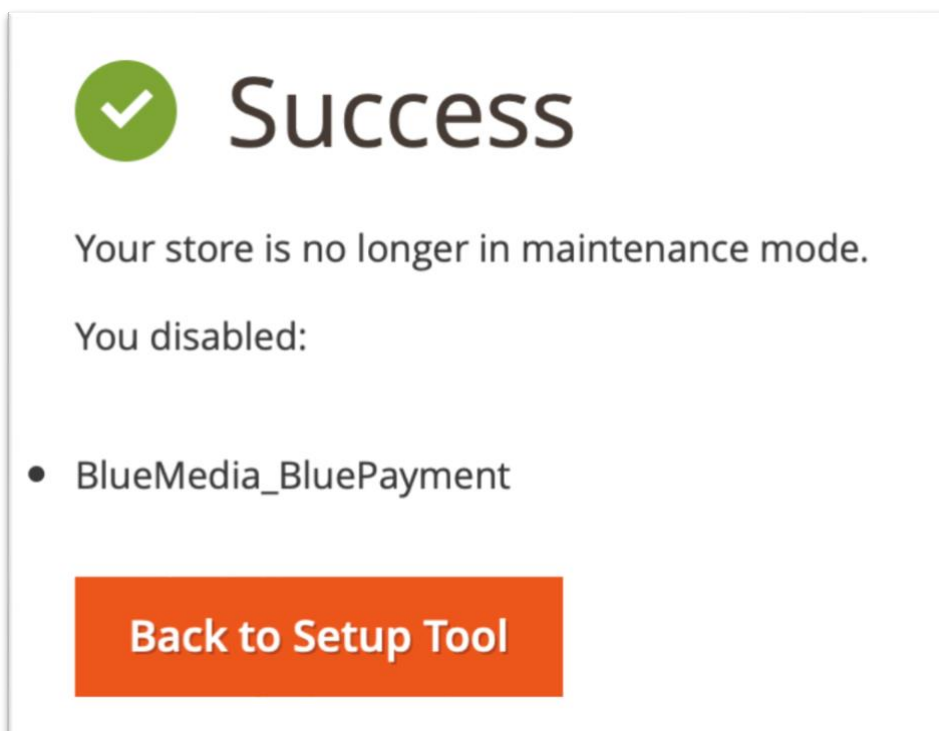

Step 3: Disable

We will take your store offline to protect shoppers during the duration of the disable activity.

We're ready to disable BlueMedia_BluePayment.

Disable

8. Deactivation of the module may take a few minutes. After correct deactivation, the message will show up.

Through command line

1. In Magento's main catalog, execute commands:
 - **bin/magento module:disable BlueMedia_BluePayment --clear-static-content**
 - **bin/magento setup:upgrade**
 - **bin/magento setup:di:compile**
 - **bin/magento cache:flush**

(optional) Cleaning files and data bases

5. In Magento's main catalog delete catalog: **app/code/BlueMedia**
6. Execute following queries to data base:
 - **DROP TABLE `blue_card`;**
 - **DROP TABLE `blue_gateway`;**
 - **DROP TABLE `blue_refund`;**
 - **DROP TABLE `blue_transaction`;**
7. Due to deleting whole module configuration, execute following query to data base:
 - **DELETE FROM `core_config_data` WHERE `path` LIKE 'payment/bluepayment%';**
